Project summary

Welcome to the How-To manual of “Video Store Tracking System” In this manual, you can find various Oracle statements to use along with a brief explanation of how it works. You should be able to find some of these are very valuable to your business report. If not, there’s always something new to learn from reading this manual

My name is Tien Le and this project is one of the most time consuming things I have ever done. Mostly it’s because Oracle has some different rules than SQL, and coming from a SQL background, I had to readjust myself with these new rules.

One of the most frustrating things I have encountered while making this document is that Oracle gives you very generic error messages. It also doesn’t point out directly where the error is, but you have to look through the whole statement, which sometimes can be 20 lines, just to find one missing comma.

Most of the requirements for this project are not too hard, but rather a little hard to read. I had to re-read most of the requests to make sure I’m not misunderstanding anything, and even had my brother help me with the translation (I’m not a native English speaker, as you can see). While it did take a bit of time, I finally finished all of them.

All and all, there is not much to talk about this project because it is very straight forward. And that’s why I really like this project. I know exactly what to do after understanding the requirements and then work my best to complete them. Finishing this project gave me a lot more knowledge when I first started it, and made me really confident in my Oracle and SQL skills.

And I hope the readers learn something from this too.

Requirements statements

1. CREATE TABLE¹
 - a. PRIMARY KEY²
 - b. FOREIGN KEY³
 - c. UNIQUE
 - d. CHECK
 - e. NOT NULL
 - f. Display all Constraint in the Appendix-A
2. CREATE CONSTRAINTS⁴
3. INSERT⁵
4. Handling Virtual Columns⁶
5. Modifying Existing Rows
 - a. UPDATE command
 - b. Substitution Variables
6. Deleting rows
7. Sequences
 - a. Creating Sequences
 - b. Altering Sequence Definitions
 - c. Display all Sequences in the Appendix-B
8. Indexes
 - a. B-Tree Indexes
 - b. Bitmap Indexes
 - c. Function-Based Indexes
 - d. Display all Indexes in the Appendix-C

¹ B1a

² B1a

³ B1b

⁴ B1b

⁵ B1c

⁶ B3, B4, B5, B7, B10

9. Creating Queries restricting Rows and Sorting Data

- a. WHERE Clause⁷
- b. BETWEEN . . . AND Operator
- c. IN Operator
- d. LIKE Operator
- e. Logical operators
- f. Treatment of NULL Values
- g. ORDER BY Clause⁸
 - i. Secondary Sort
 - ii. Sorting by SELECT Order

10. Joining Data from Multiple Tables

- a. Cartesian Join⁹
- b. Equality Join¹⁰
- c. Non-Equality Join¹¹
- d. Self-Join
- e. Outer Join

11. Selected Single-Row Functions

- a. Case Conversion
 - i. LOWER Function
 - ii. UPPER FUNCTION
 - iii. INITCAP Function
- b. Character Manipulation Function
 - i. SUBSTR Function
 - ii. INSTR Function
 - iii. LENGTH Function
 - iv. LPAD and RPAD Function

⁷ B3, B4, B5

⁸ B4

⁹ B5

¹⁰ B3, B5, B6, B7, B8, B9, B10

¹¹ B4

- v. LTRIM and RTRIM Function
- vi. REPLACE Function
- vii. TRANSLATE Function
- viii. CONCAT Function
- c. Number Functions
 - i. ROUND and TRUNCATE
 - ii. MOD Function
 - iii. ABS Function
 - iv. POWER Function
- d. DATE Function
 - i. MONTH_BETWEEN Function
 - ii. ADD_MONTH Function
 - iii. NEXT_DAY and LAST_DAY Function
 - iv. TO_DATE Function
 - v. Rounding Date Values
 - vi. Truncating Date Values¹²
 - vii. CURRENT_DATE Versus SYSDATE¹³
- e. GROUP Function
 - i. SUM Function
 - ii. AVG Function
 - iii. COUNT Function¹⁴
 - iv. MAX Function¹⁵
 - v. MIN Function

12. Subqueries and MERGE

- a. A. Single-Row Subquery
- b. Multiple-Row Subquery¹⁶

¹² B3

¹³ B4

¹⁴ B7, B10

¹⁵ B4

¹⁶ B3, B4, B5, B10

A: Initial Script Load

Overview when running the script:

After reviewing the script, I have found 2 general errors

Some tables started with vb instead of vs

Index vs_tblRentals_customerID_idx started with DROP instead of DROP INDEX

Both have been fixed, refer to [Appendix A12](#) for more information

I ran the script twice because I didn't like the errors at the start when there aren't any tables to DROP. Here is the result after I ran the script twice.

186	0.01	INSERT INTO vs_BiActors VALUES(1923, 'Coltrane', 'Robbie', 'NU	1 row(s) inserted.	1
187	0.00	INSERT INTO vs_BiActors VALUES(10978, 'Smith', 'Maggie', NULL	1 row(s) inserted.	1
188	0.00	INSERT INTO vs_BiActors VALUES(4566, 'Rickman', 'Alan', NULL	1 row(s) inserted.	1

3 With Errors

Copyright © 1999, 2015, Oracle. All rights reserved.

Application Express 5.0.3.00.03

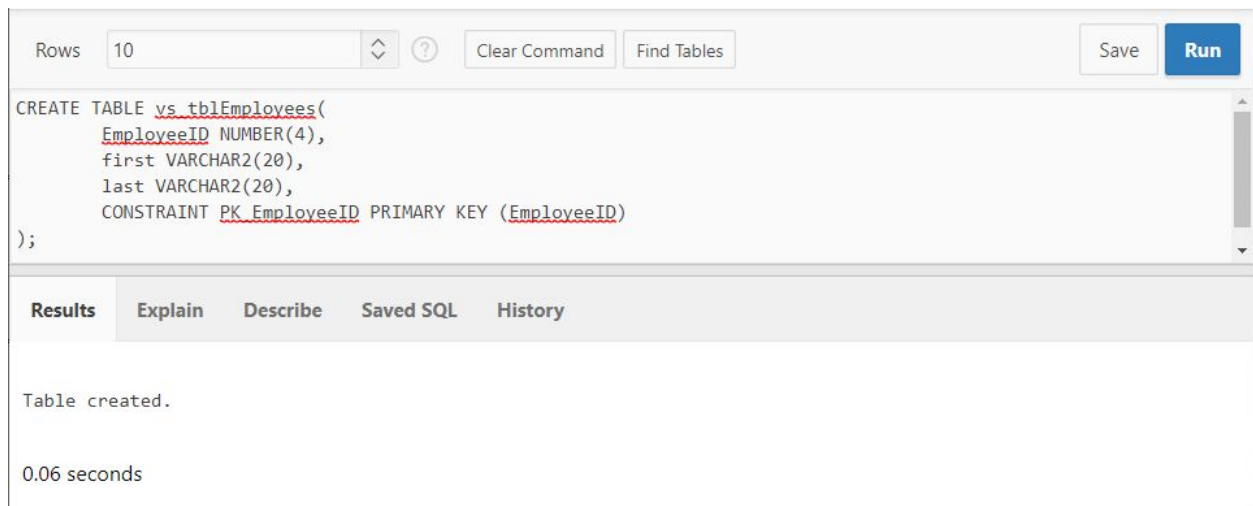

There are 3 errors showing in the image, which are

Number	Elapsed	Statement	Feedback	Rows ↑
18	0.00	DROP INDEX vs_GenreBridge_GenreID_idx	ORA-01418: specified index does not exist	-
19	0.00	DROP INDEX vs_tblRentals_rentalDate_idx	ORA-01418: specified index does not exist	-
20	0.00	DROP INDEX vs_tblRentals_customerID_idx	ORA-01418: specified index does not exist	-
1	0.72	DROP TABLE vs_tblStates CASCADE CONSTRAINTS	Table dropped.	0

Reason for these errors is because the indexes are created at the bottom of the script so when they were called to DROP, they didn't exist.

B1: Add/Create vs_tblEmployee

[PK] EmployeeID

Using simple syntax to create a table for employees with a primary key of EmployeeID, first name and last name columns.

I made it simple so that further down the line people can add more things to it, making it more and more sofiscate. For now, let me be as simple as 1 2 3.

Add a foreign key EmployeeID to vs_tblRentals linking to vs_tblEmployee

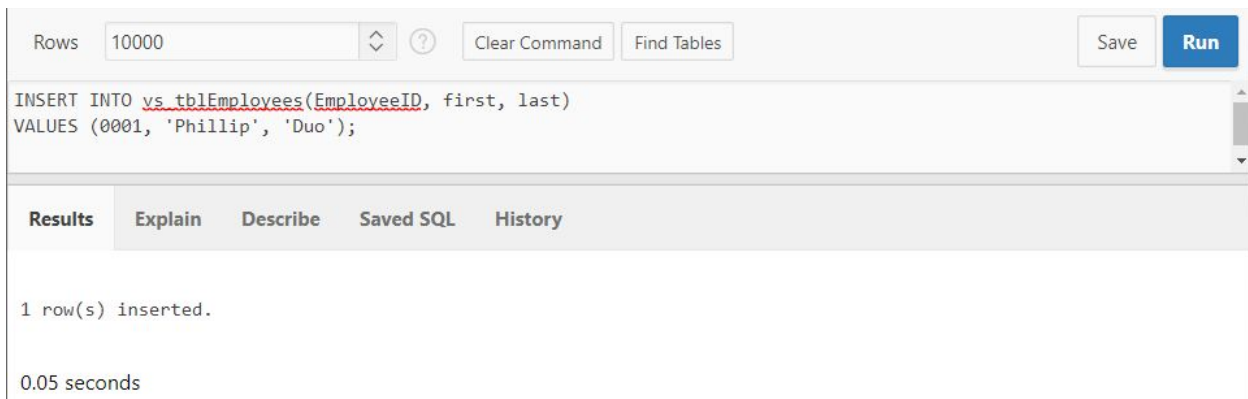

The screenshot shows the SQL Developer interface. At the top, there's a toolbar with 'Rows' set to 10000, a 'Clear Command' button, a 'Find Tables' button, a 'Save' button, and a 'Run' button. Below the toolbar, the SQL command is entered in a text area: `ALTER TABLE vs_tblRentals ADD EmployeeID NUMBER(4);`. Below the command area, there's a tabbed interface with 'Results' selected. The results pane shows the message 'Table altered.' and the execution time '0.14 seconds'.

First, I have to make a column as a foreign key to reference the primary key

The screenshot shows the SQL Developer interface. At the top, there's a toolbar with 'Rows' set to 10000, a 'Clear Command' button, a 'Find Tables' button, a 'Save' button, and a 'Run' button. Below the toolbar, the SQL command is entered in a text area: `ALTER TABLE vs_tblRentals ADD CONSTRAINT FK_EmployeeID FOREIGN KEY(EmployeeID) REFERENCES vs_tblEmployees(EmployeeID);`. Below the command area, there's a tabbed interface with 'Results' selected. The results pane shows the message 'Table altered.' and the execution time '0.09 seconds'.

Here is the code to add a foreign key as well as proof of work. There's not much to talk about these simple clauses.

INSERT at least 10 employees with appropriate data

Rows: 10000

Clear Command Find Tables Save Run

```
INSERT INTO vs_tblEmployees(EmployeeID, first, last)
VALUES (0001, 'Phillip', 'Duo');
```

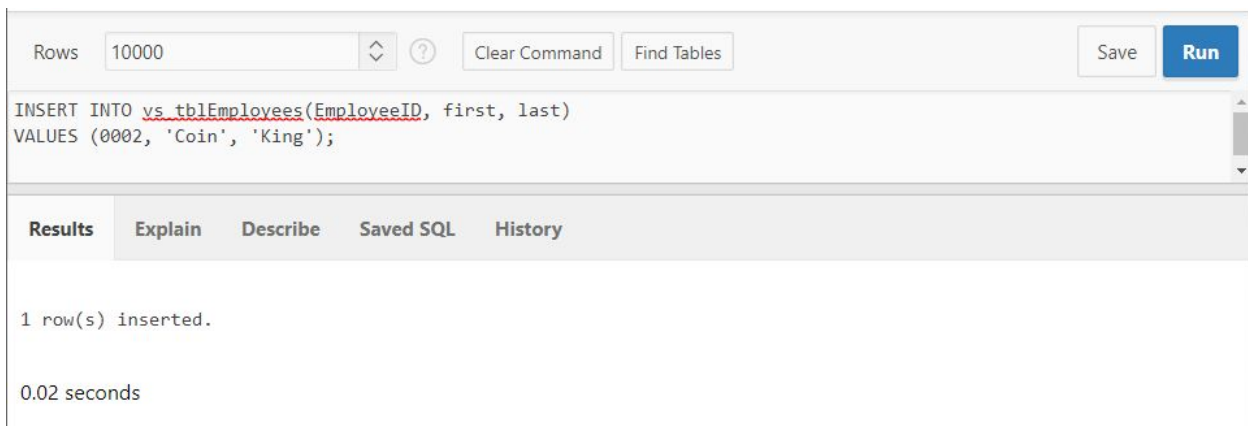

Results Explain Describe Saved SQL History

1 row(s) inserted.

0.05 seconds

Here I used an INSERT INTO clause to insert a value into the Employee table. Oracle doesn't allow multiple values to be entered at the same time, so I had to insert each value one by one.

Below are the pictures of the remaining 9 values, adding to a total of 10 employees for this Video Store Tracking System.

Rows: 10000

Clear Command Find Tables Save Run

```
INSERT INTO vs_tblEmployees(EmployeeID, first, last)
VALUES (0002, 'Coin', 'King');
```

Results Explain Describe Saved SQL History

1 row(s) inserted.

0.02 seconds

B2: Actors role List for actors all their movies

Rows: 10000

```
SELECT vs_tblActors.StageFname AS Actor_FirstName,
       vs_tblActors.StageLname AS Actor_LastName,
       vs_tblCastMemberRoles.CastMemberRoleTitle AS Role,
       vs_tblMovies.MovieName AS Movie_Name,
```

Results Explain Describe Saved SQL History

ACTOR_FIRSTNAME	ACTOR_LASTNAME	ROLE	MOVIE_NAME	GENRE
Arthur	Freed	Production	Annie Get Your Gun	Action
Carrol	Naish	character	Annie Get Your Gun	Action
George	Sidney	Directing	Annie Get Your Gun	Action
Sidney	Sheldon	Writing	Annie Get Your Gun	Action
Charles	Rosher	Camera	Annie Get Your Gun	Action
Louis	Calhern	character	Annie Get Your Gun	Action
Howard	Keel	character	Annie Get Your Gun	Action
Betty	Hutton	character	Annie Get Your Gun	Action
Mali	Finn	Production	Avatar	Action
Christopher	Boyes	Sound	Avatar	Action

us_a249_sql_s37 en Copyright © 1999, 2015, Oracle. All rights reserved. Application Express 5.0.3.00.03

The table returns with the list of actors and cast members of the movie along with its genre. For “Annie Get Your Gun” you can see who’s responsible for what with this table.

Basically for this query (and others below) I first wrote the JOIN clause to join all the three tables that I needed. And then call all the necessary columns that are needed.

Other queries below also use the same join clause because ultimately the join statement between these tables works really well for other queries too.

View the full code at [Appendix A4: B2](#).

B3: List of actors per movie sorted by genre, year distributed and title

Rows: 10000

```

JOIN vs_tblGenres
  ON vs_tblGenreBridge.GenreID = vs_tblGenres.GenreID
WHERE vs_tblCastMemberRoles.CastMemberRoleTitle = 'character'
ORDER BY vs_tblGenres.GenreTitle, vs_tblMovies.MovieReleaseDate;

```

Results Explain Describe Saved SQL History

Taylor	Kitsch	Action	1912	John Carter
Samantha	Morton	Action	1912	John Carter
Willem	Dafoe	Action	1912	John Carter
Thomas	Church	Action	1912	John Carter
Lynn	Collins	Action	1912	John Carter
Mark	Ruffalo	Action	1912	The Avengers
Chris	Hemsworth	Action	1912	The Avengers
Scarlett	Johansson	Action	1912	The Avengers
Jeremy	Renner	Action	1912	The Avengers

us_a249_sql_s37 en Copyright © 1999, 2015, Oracle. All rights reserved. Application Express 5.0.3.00.03

You can see the list of actors on the left, and which movie they are starring in on the right most columns. This list is ordered by the year, so in this picture you can see the oldest movie the store currently has is the movie “John Carter” which was released in the year 1912. (Which... is weird, because I remember seeing it in theaters, yet I was born 87 years after the release...)

B4: List of customers by last name, first name CustID that have not rented a video in x number of days

Rows: 10000

```

ON vs_tblCustomers.CustomerID = vs_tblRentals.CustomerID
GROUP BY vs_tblCustomers.Lastname, vs_tblCustomers.Firstname, vs_tblCustomers.CustomerID
ORDER BY vs_tblCustomers.Lastname, vs_tblCustomers.Firstname, vs_tblCustomers.CustomerID) data
WHERE (SYSDATE - 14) > data.LastRental;

```

Results Explain Describe Saved SQL History

us_a249_sql_s37 en Copyright © 1999, 2015, Oracle. All rights reserved. Application Express 5.0.3.00.03

First of all, let me thank my professor for providing the pseudo code for this one. Before receiving the message from my professor, I had already finished this part with a different code, but this code works so much better and provides results with a clearer look.

You can see which customers last rented a movie along with their ID. In this example, I used $x = 14$, but in reality you can use any number you want.

B5: For a specific actor list all the other actors they have worked with along with the movie title and year

Rows: 10000

```
WHERE vs_tblActors.StageLname = 'Evans' AND vs_tblActors.StageFname = 'Chris'
) db
ON db.MovieID = vs_tblMovies.MovieID
WHERE vs_tblActors.StageLname != 'Evans' AND vs_tblActors.StageFname != 'Chris';
```

Results Explain Describe Saved SQL History

ACTORSLNAME	ACTORSFNAME	MOVIE	YEAR
Downey	Robert	The Avengers	1912
Hiddleston	Tom	The Avengers	1912
Renner	Jeremy	The Avengers	1912

Johansson	Scarlett	The Avengers	1912
Boyes	Christopher	The Avengers	1912
Boyes	Christopher	The Avengers	1912
Silvestri	Alan	The Avengers	1912
Finn	Sarah	The Avengers	1912
Zolfo	Victor	The Avengers	1912

us_a249_sql_s37 en Copyright © 1999, 2015, Oracle. All rights reserved. Application Express 5.0.3.00.03

In this one, I used Chris Evans as my example, but if you can really use any actor you want, just switch their names with Chris and Evans.

I made a subquery which only returns the IDs of the movies that have Chris Evan in it, and then INNER JOIN it with my big 3 table joined clause that I have been using (Refer to [Appendix A7: B5](#) for more information), which leave only the actors that has appeared in same movie as Chris. After that I remove Chris from the table for clarity.

B6: Generate a list of boxes that have been rented more than 5 times

Rows: 10000

```

ON vs.tblMovies.MovieID = vs.tblBoxes.MovieID
JOIN vs.tblRentals
ON vs.tblBoxes.BoxID = vs.tblBoxes.BoxID
WHERE vs.tblBoxes.RentalCount > 5;

```

Results Explain Describe Saved SQL History

BOXID	MOVIE NAME	RENTALCOUNT
11	Finding Nemo	38
36	Pirates of the Caribbean: The Curse of the Black Pearl	70
28	Pirates of the Caribbean: The Curse of the Black Pearl	92
39	Pirates of the Caribbean: Dead Mans Chest	21
59	Star Trek V: The Final Frontier	24
68	King Kong	96
73	Batman	51
89	Pirates of the Caribbean: At Worlds End	15
83	Pirates of the Caribbean: At Worlds End	56
94	Driving Miss Daisy	44

us_a249_sql_s37 en us_a249_sql_s37 Copyright © 1999, 2015, Oracle. All rights reserved. Application Express 5.0.3.00.03

As you can see, not only it returns the boxes that were rented more than 5 times, it also returns the number of times it had been rented, and also the name of the movie

It may look like there's a problem with the table, because "PotC: TCotBP" appears twice, but it is because the movie was actually in 2 different boxes and can be seen with 2 different BoxID.

B7: Generate a list which includes the number of boxes per movie.

Rows: 10000

```

ON vs_tblMovies.MovieID = vs_tblBoxes.MovieID
JOIN vs_tblRentals
ON vs_tblBoxes.BoxID = vs_tblBoxes.BoxID
GROUP BY vs_tblMovies.MovieName;

```

Results Explain Describe Saved SQL History

MOVIE NAME	COUNT(VS_TBLBOXES.BOXID)
John Carter	3570
The Hobbit: The Desolation of Smaug	2618
Octopussy	3808
A Streetcar Named Desire	2142
Quantum of Solace	3332
The Avengers	2856
Tangled	5712
Saving Private Ryan	476
Star Wars	1904
Robin Hood	2142

us_a249_sql_s37 en Copyright © 1999, 2015, Oracle. All rights reserved. Application Express 5.0.3.00.03

For this one I just join the 3 tables movies, boxes and rentals so I can call the columns and use the COUNT() function. For some reasons, this particular statement runs really slow, but in the end it worked as I expected

B8: Generate a rental count for each movie

Rows: 10000

```

ON vs_tblMovies.MovieID = vs_tblGenreBridge.MovieID
JOIN vs_tblGenres
ON vs_tblGenreBridge.GenreID = vs_tblGenres.GenreID
JOIN vs_tblMediumTypes

```

Results Explain Describe Saved SQL History

MOVIE NAME	GENRE	DISTRIBUTOR	RENTALCOUNT	DATEBOXRECEIVED	BOXID	DISKTYPE
A Streetcar Named Desire	Drama	Charles K. Feldman Group	53	22-Nov-1953	253	blu-ray
A Streetcar Named Desire	Drama	Charles K. Feldman Group	97	22-Nov-1953	250	dvd
Alexanders Ragtime Band	Drama	Twentieth Century Fox Film Corporation	11	31-Oct-1938	569	blu-ray

Alexanders Ragtime Band	Music	Twentieth Century Fox Film	11	31-Oct-1938	569	blu-ray

us_a249_sql_s37 en us_a249_sql_s37 Copyright © 1999, 2015, Oracle. All rights reserved. Application Express 5.0.3.00.03

This one is pretty easy, I just joined a bunch of tables and called the required columns. It turned out to be a drag because I ended up joining almost all of the tables that I had in my database.

B9: List all movie titles in your inventory that have never been rented

Application Builder | SQL Workshop | Team Development

Packaged Apps

SQL Commands Schema US_A249_SQL_S37

Rows 10 Clear Command Find Tables Save Run

```
SELECT vs_tblMovies.MovieName, vs_tblBoxes.RentalCount
FROM vs_tblMovies
JOIN vs_tblBoxes ON vs_tblMovies.MovieID = vs_tblBoxes.MovieID
WHERE vs_tblBoxes.RentalCount = 0;
```

Results Explain Describe Saved SQL History

MOVIE NAME	RENTAL COUNT
Call Me By Your Name	0
Don't Call Me By Your Name	0
Why Would I Call You By My Name?	0
Little Corona	0
I Don't Think This Is Working	0

5 rows returned in 0.02 seconds [Download](#)

us_a249_sql_s37 us_a249_sql_s37 Copyright © 1999, 2015, Oracle. All rights reserved. Application Express 5.0.3.00.03

Originally there was no data in the database to show it, so I had to add 5 movies and add them to 5 boxes. I display the result with the name of the movie, and the rental count to make sure that all of them is correct

B10: List all movie titles that you have only 1 copy in your inventory

The screenshot shows the SQL Developer interface. At the top, the 'SQL Commands' tab is active, and the schema is set to 'US_A249_SQL_S37'. The 'Rows' limit is set to 100000. The query being executed is:

```
SELECT vs_tblMovies.MovieName, COUNT(vs_tblBoxes.BoxID)
FROM vs_tblMovies
JOIN vs_tblBoxes ON vs_tblMovies.MovieID = vs_tblBoxes.MovieID
GROUP BY vs_tblMovies.MovieName
HAVING COUNT(vs_tblBoxes.BoxID) = 1;
```

The 'Results' tab is selected, showing a table with two columns: 'MOVIEName' and 'COUNT(VS_TBLBOXES.BOXID)'. The table contains one row: 'Blazing Saddles' with a count of 1. Below the table, it states '1 rows returned in 0.01 seconds' and provides a 'Download' link.

MOVIEName	COUNT(VS_TBLBOXES.BOXID)
Blazing Saddles	1

1 rows returned in 0.01 seconds [Download](#)

At the bottom of the interface, the user is identified as 'us_a249_sql_s37', and the application version is 'Application Express 5.0.3.00.03'.

The code here is simple. Just count the values corresponding to each box ID. Sometimes I mistake when to use HAVING and WHERE.

Appendix A: Source code

Appendix A1: B1-a

```
CREATE TABLE vs_tblEmployee(  
    EmployeeID NUMBER(4),  
    first VARCHAR2(20),  
    last VARCHAR2(20),  
    CONSTRAINT PK_EmployeeID PRIMARY KEY (EmployeeID)
